Experience

Kuberhunt Treasure Pvt. Ltd. (formerly Cirrus) *July 2024 - Present*
Full-Stack Developer | SvelteKit, FastAPI, Flutter, Dart, MongoDB, Redis, Docker, AWS, Cloudflare

Cirrus — Multi-Broker Manual & Algo Trading Platform

- Built WebSocket and REST APIs for order placement across multiple demat accounts, with holdings, positions, and funds aggregated into a single view.
- Built realtime option-chain and market visualizations over streaming market data.
- Built OAuth onboarding (Email, Mobile, Google), an admin analytics dashboard, and a Capacitor mobile app.

Kuberhunt — SEBI-Compliant Research Analyst Marketplace

- Built features end-to-end across all three surfaces — investor, RA, and admin on SvelteKit, a Flutter investor app, and a FastAPI backend.
- Built RA onboarding with admin approval/rejection workflows, and RA plan management (Recommendations, Modelfolio).
- Built multi-party payments end-to-end over Razorpay and Cashfree — refunds, autopay renewals, idempotent webhooks, and reconciliation jobs for investors subscriptions.
- Built the admin console — revenue and subscription analytics, user-journey drill-downs, RAs performance, payouts, and wallet top-ups.
- Built the investor mobile app — live recommendations, Modelfolio, DigiLocker KYC, subscriptions, and single/basket order routing into broker apps via deep-link or web.

Terado Engineering | *Full-Stack Developer* *March 2024 - July 2024*
React.Js, Vue.Js, Node.Js, Express.Js, MySQL, Sequelize ORM

- **UNI5 (HR):** CSV bulk employee onboarding with row-level validation, geo-verified attendance capture, and payroll aggregation by department and designation.
- **Simpolo Tiles:** Order lifecycle, CSV dealer import, meeting scheduling with automated email notifications, role-scoped dashboards and dealer's order reports.

Personal Projects

Svakosh | Code | Demo *SvelteKit, FastAPI, MongoDB, Redis, Docker, AWS EC2, Vercel*
Architected, built & deployed a full-stack stock-market analytics platform, a custom Svelte 5 component library, passwordless auth (passkeys/WebAuthn, OTP, Google OAuth) on JWT with Redis-backed sessions, multi-watchlist CRUD, and Apache ECharts dashboards; self-hosted the backend on an AWS EC2 instance running Dokploy (Docker Compose), frontend on Vercel, with GitHub Actions CI/CD.

Story | Code | APK *Flutter, FastAPI, MongoDB, Redis, Docker, Dokploy, Gemini API*

- Built an anonymous social writing app (Flutter + FastAPI) — text and image posts, reactions, comments, follows, communities, search, realtime updates over WebSocket on Redis pub/sub, plus FCM push notification, device-session revocation and end-to-end encrypted private chat and a media vault (Argon2id, AES-256-GCM).
- Integrated a provider-agnostic AI layer for post auto generation and pollishing content and suggestion of community; deployed on Docker + Dokploy with Cloudflare R2 storage.
